Human Rights Violations in Afrin

The Turkish Occupationists' Use of Chemical Weapons against Citizens

The occupationist Turkish army and its mercenaries took the path of destruction and brutal killing against the people of the Afrin Region. However, Afrin with its people and all components and sects thwarted these attacks by adopting the option of resistance.

On January 20, the Turkish occupationists and their Al-Qaeda mercenaries launched attacks on Afrin, which has hosted hundreds of thousands of displaced people from various Syrian regions in the context of their intentions to occupy north Syria and pursue a policy of demographic change.

The people of the region with its daughters and sons showed resistance, championship and sacrifice in response to the attacks launched by the Turkish occupationist army.

The Turkish aircrafts and artilleries targeted the populated areas, resulting in the death and wounding of hundreds of civilians.

Day after day, scenes reveal the brutal truth of the Turkish army and its allied Jihadist/Salafist factions, adopting a systematic method in the mutilation of corpses and the documentation of these crimes, which is a stain on the forehead of a NATO ally.

Days ago, the world was shocked by the scenes of the mutilation of the body of a female fighter from Women's Protection Units (YPJ), as well as the brutal torture of civilians whom they kidnapped from different places invaded by the Turkish army. These monsters proved to the world that these scenes were never individual mistakes but rather express the true identity of the perpetrators.

The policy of the Turkish occupationists did not stop at the mutilation of the victims, nor at the use of weapons employed against the population, but also resorted to the use of internationally banned chemical weapons against the people. On February 16, 2018, the Turkish occupationists, along with its mercenaries, shelled the village of Aranda in the Shiah town of Afrin, with a kind of toxic gases, resulting in the suffocation of 6 civilians who were transferred to the hospital. The are:

1- Abdulrehman Shalik, Muhammad, 29.

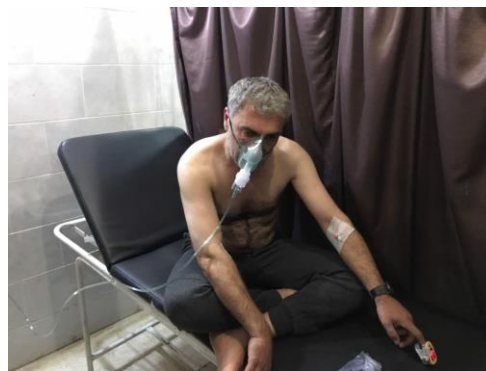

2-Mehmood Rasheed Hasoon, 33.

3-Wedah Mustafa Khalil, 35.

4-Ahmad Muhammad Hamo, 38.

5-Adnan Shaliko, Uthman, 35.

6-Muhammad Arif Haqi, 43.
